Mr. Dick Padget
Facility Engineer
Bunker Limited Partnership
P.O. Box 29
Kellogg, ID 83837

Dear Mr. Padget:

This letter is to follow up on our telephone conversation of January 17, 1986 concerning asbestos removal activities at the Bunker Limited facility in Kellogg, Idaho.

The National Emissions Standards for Asbestos require that you provide written notice to the Environmental Protection Agency (EPA) in advance of any demolition or renovation operation involving friable asbestos material in accordance with 40 CFR 61.146. Prior notification is required in order to allow EPA to ensure that the demolition or renovation operation proceeds in accordance with the law. Notification of the demolition or renovation must include an estimate of the amount of friable asbestos material present and the name and location of the waste disposal site. For renovation operations involving individual nonscheduled operations, the additive amount of friable asbestos material to be removed over the maximum period of time (not to exceed one year) can be reported.

Enclosed is information on notification requirements, a notification form, and a copy of the Federal Regulations. Please provide notification concerning any asbestos renovation and/or demolition operations. If you have any questions please contact me at (208) 334-9389.

Sincerely,

A handwritten signature in cursive script that reads "Albert L. Odmark, Jr.".
